

ITS Python Edition

```
pip install -e .
```

Running

```
flask --app be run --debug
```

Build

```
docker build . -t its-be:latest  
  
docker run -p 8080 --rm its-be:latest
```

Tech

This uses the following technologies:

- [Flask](#)
- [Flask-Login](#)
- [PonyORM](#)

Flask handles the web requests and responses, Flask-Login handles the user authentication, and PonyORM handles the database.

The app setup occurs in **be/_init_.py**. All the routes for the login are in **be/auth.py** and the api for interacting with the backend are in **be/api.py**.
